

THEY'RE A PERMANENT IMPROVEMENT
NOT A SHORT CUT

FIRE SAFE
STEEL CEILINGS

In keeping with the modern trend Wheeling continues to design new patterns for the purpose of creating entirely new and pleasing effects in ceilings of old or new buildings. For the ceilings of the new building there are many patterns to harmonize with the type of construction. For the old building the Wheeling Steel Ceiling will transform a long used plastered ceiling into a bright, modern and fire-safe ceiling in minimum time. Installation is made right over the old ceiling without removing plaster.

All Wheeling Steel Ceilings are fire-safe. They are a definite protection to property because they are a barrier to fire. Every plate or unit is equipped with Wheeling's repressed bead joints and die-cut nail holes which account for ease of installation.
